

Project Design Phase Proposed Solution Template

Date	2 July 2026
Team ID	
Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	India's agricultural production data is scattered across massive datasets spanning 25 years (345,408 records) without a centralized, interactive visual platform for policy and research analysis.
2.	Idea / Solution description	A web-based interactive Business Intelligence dashboard built using Tableau Public, embedded into a responsive website using HTML/CSS/Bootstrap, allowing users to filter by state, crop, and year.
3.	Novelty / Uniqueness	Combines 25 years of historical data into a single, highly performant visual interface with 6 simultaneous cross-filters and geographic choropleth mapping without requiring any user login or paid software.
4.	Social Impact / Customer Satisfaction	Empowers farmers, researchers, and government policymakers to make data-driven decisions regarding crop yields, seasonal trends, and agricultural subsidies.

5.	Business Model (Revenue Model)	Open-source and free-to-use public tool. Hosted at zero cost using Tableau Public and Vercel CDN. Future revenue could be generated via premium API access or district-level predictive reports.
6.	Scalability of the Solution	Highly scalable since the Tableau visualization engine runs in-memory on Tableau Public servers, and the frontend website is statically served globally via Vercel's edge network CDN.
